CYBER ALL THE THINGS: INTEL OVERLOAD VS. ENLIGHTENMENT

AVERAGE INTEGRATION LOOKUP FAN (The Problem)

Picked a view, read a stack of cards, pivoted... now repeating for the next indicator... again.

AVERAGE PLAIN LANGUAGE QUERY ENJOYER (The Goal)

I just asked the recommended AI skill and got a combined answer. Evidence is one click away.

Make your presentation, keep your sanity.

THE MCP TOOLBOX

Eight tools, one workflow

SAME INDICATOR.
MORE CONTEXT.
LESS TAB SPRAWL.

- ✓ FASTER TRIAGE
- ✓ RICHER DATA
- ✓ BETTER DECISIONS

 cont3xt

NO MORE
TAB HELL.
JUST
CONTEXT.

1 cont3xt_search

The primary tool. One or more indicators across every enabled integration, combined.

Options: doIntegrations, skipChildren, skipCache.

ONE QUERY.
ALL THE THINGS.

2 cont3xt_classify

What kind of indicator is this?
No network calls.

FAST.
LOCAL.
SMART.

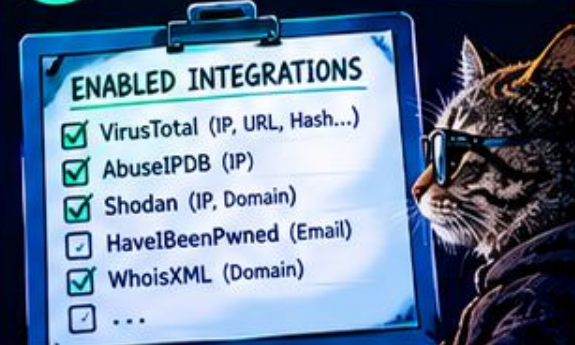

3 cont3xt_integration_search

One indicator against one named source — re-check a single result.

ONE SOURCE.
ONE RESULT.

4 cont3xt_list_integrations

What you can query, and which indicator types each source supports.

KNOW YOUR SOURCES.

5 cont3xt_views

Saved integration sets, like Just_IP_Stuff or DNS_Whois.

SAVE TIME.
USE VIEWS.

6 cont3xt_overviews

Which fields get summarised for each indicator type.

THE RIGHT DETAILS.
AT A GLANCE.

7 cont3xt_link_groups

The pivot links shown for an indicator.

CONNECT THE DOTS.

LESS MANUAL WORK.
MORE THREAT INTELLIGENCE.

COVERAGE

Cont3xt MCP can query

INDICATORS

RUN OF SHOW: Six Steps, One Indicator

(A technical guide for the cat-lover in you)

↳ *Cyber all the things!*

1. Classify

What is this indicator?
IP, Domain, or a weird email from your aunt?

Fast, Local, and smarter than phone. (Maybe).

2. Pick a scope

Select your source integrations. Use specific views!

Choose sources that don't just find kitten videos.

3. Search & summarize

One query, many answers.
Summarize the data!

Finding the needle in the internet's giant ball of yarn.

4. Pivot

Chasing digital yarns
Follow the trail!

Chasing digital yarn balls. Follow the trail!

5. Show me the money

Combine context to find actionable intel.
THE VALUE!

The final intelligence! Found... a coupon for premium tuna.

6. Re-check source

Check back with a specific source. Just to be sure. Verify!

Bob at ThreatFox said it, but let's double-check the data.

cont3xt

> more coverage, more context.

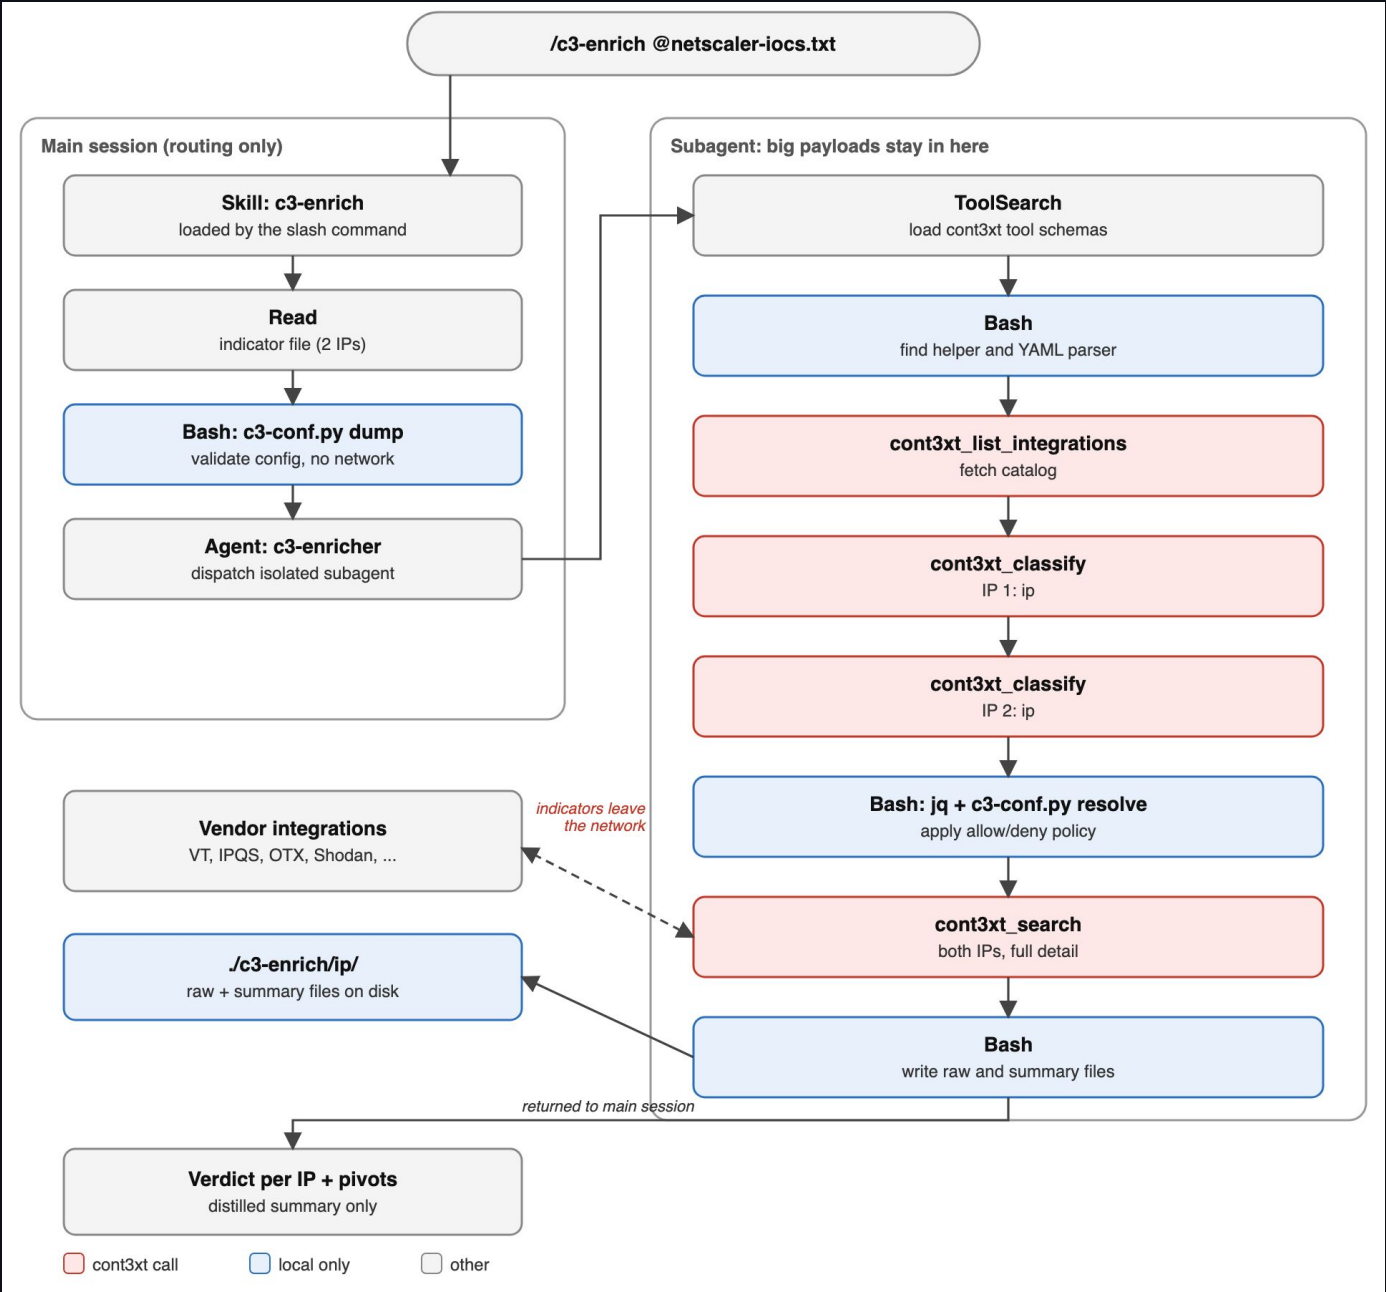

The Demo

Triage IPs in one ask

THE PROMPT

```
/c3-enrich @./netscaler-iocs.txt tag=Triage
```

Me to Claude:

Triage Two IPs in One Ask

Run: `/c3-enrich @netscaler-iocs.txt tag=Triage` · 2 indicators, 1 command, ~1 minute

IP-A 143.198.7.94

Suspicious

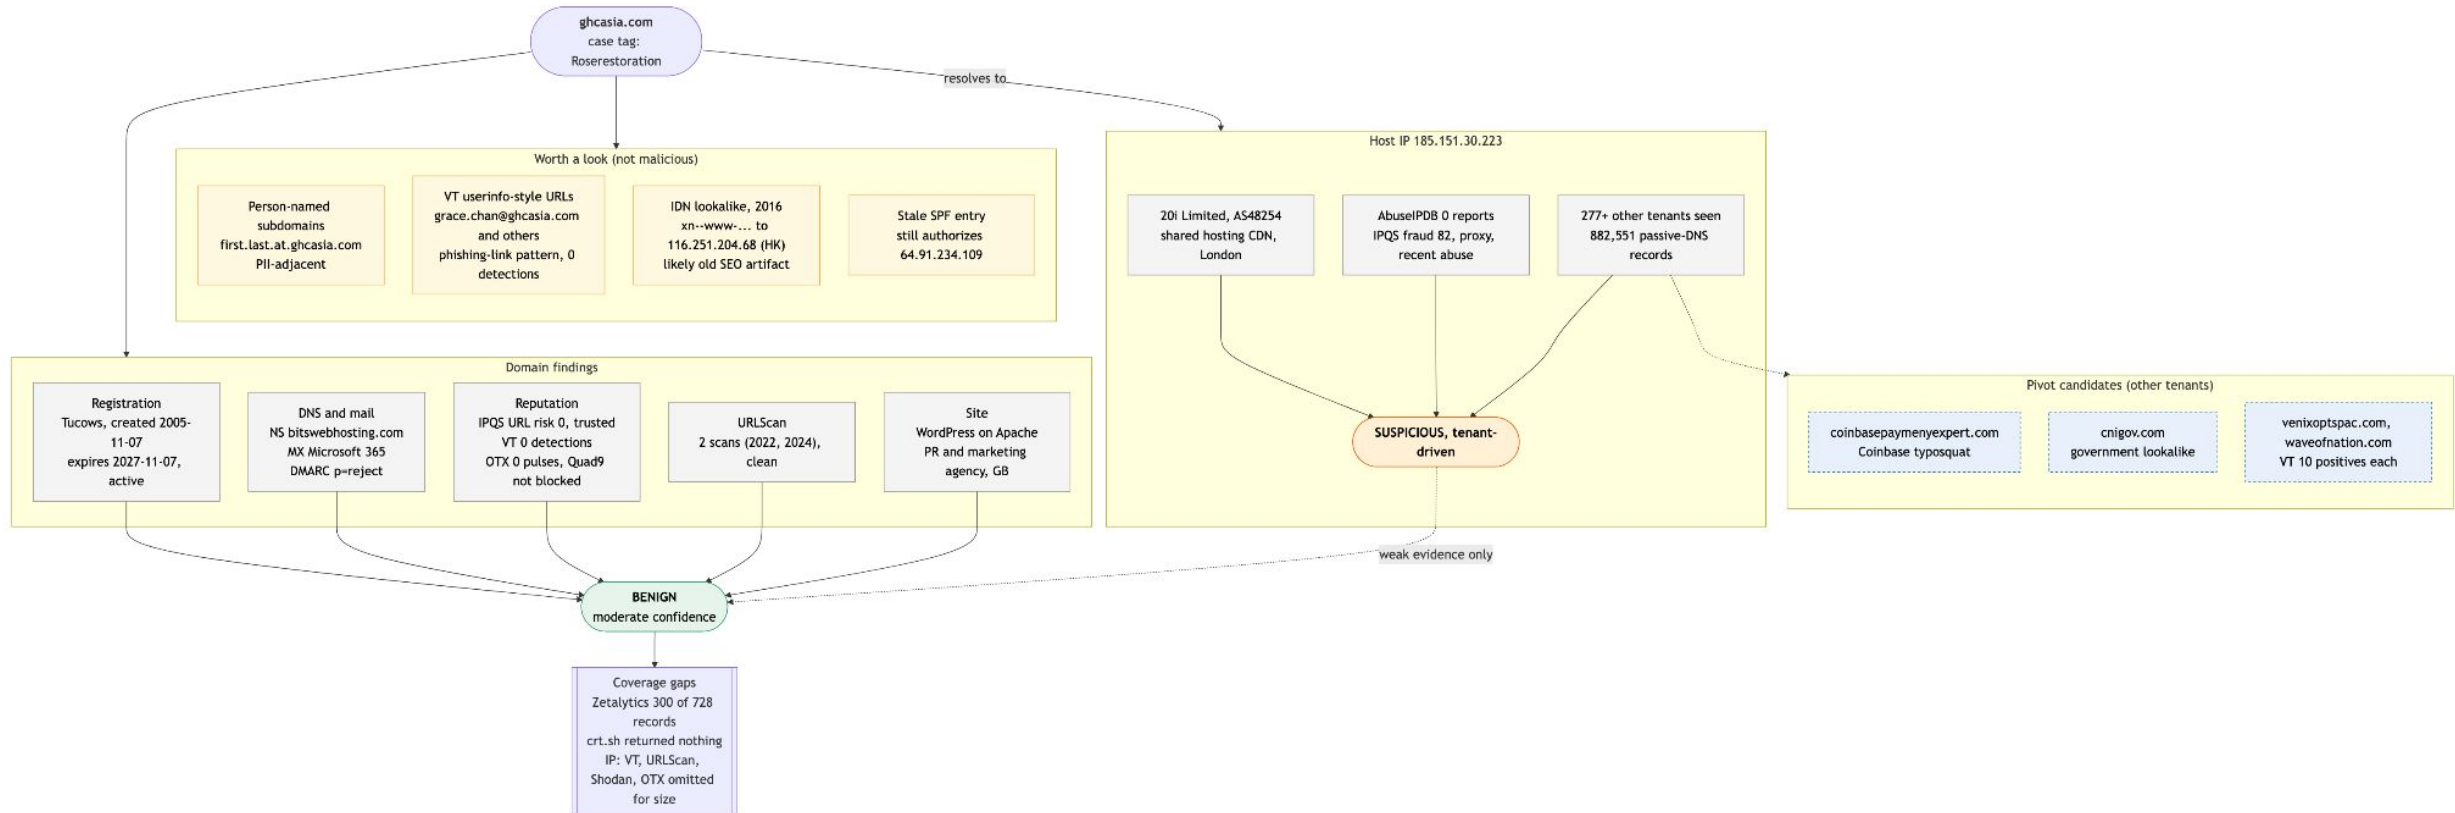

IP-B 157.254.167.12

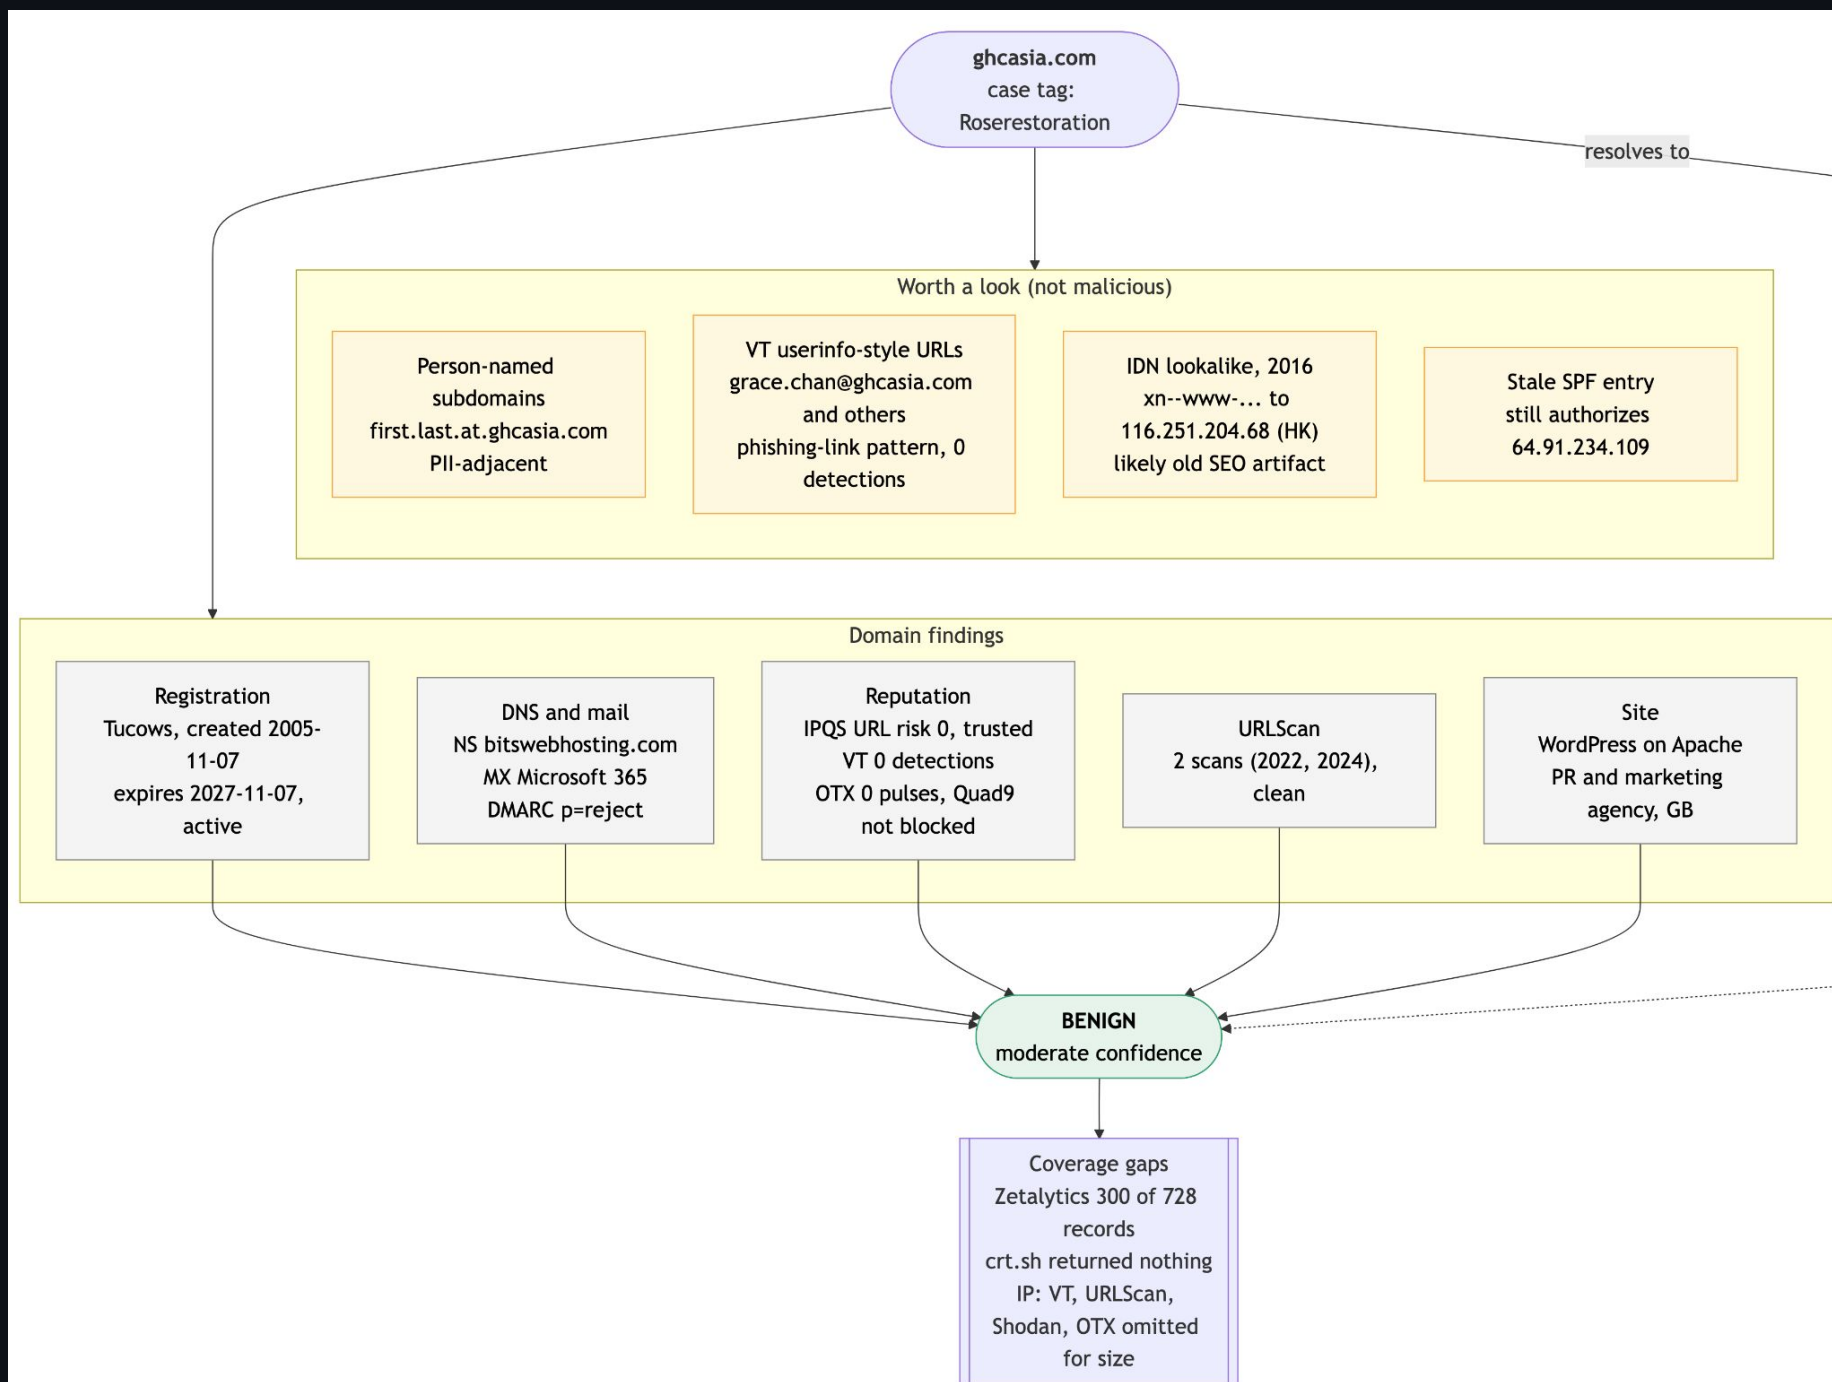

Suspicious, leaning malicious

Hosting	Major US cloud provider	US ASN, Singapore assignment
VirusTotal (bare-IP URL)	8 / 92	4 / 92
IPQS fraud score	75	91
AbuseIPDB	20 (4 reports)	0 (no reports)
Threat-intel pulses (OTX)	2	1
Open ports	22 only, very old OpenSSH 7.2	22 only, current OpenSSH 9.6
Integrations responded	12	11

Signals disagree: IP-B has the top fraud score (91) but zero abuse reports. Both sit in one threat-intel pulse about Citrix NetScaler 0-day exploitation. **Pulse membership is a lead, not proof: verify against your own logs before blocking.**

Triage a Domain (with Pivots)

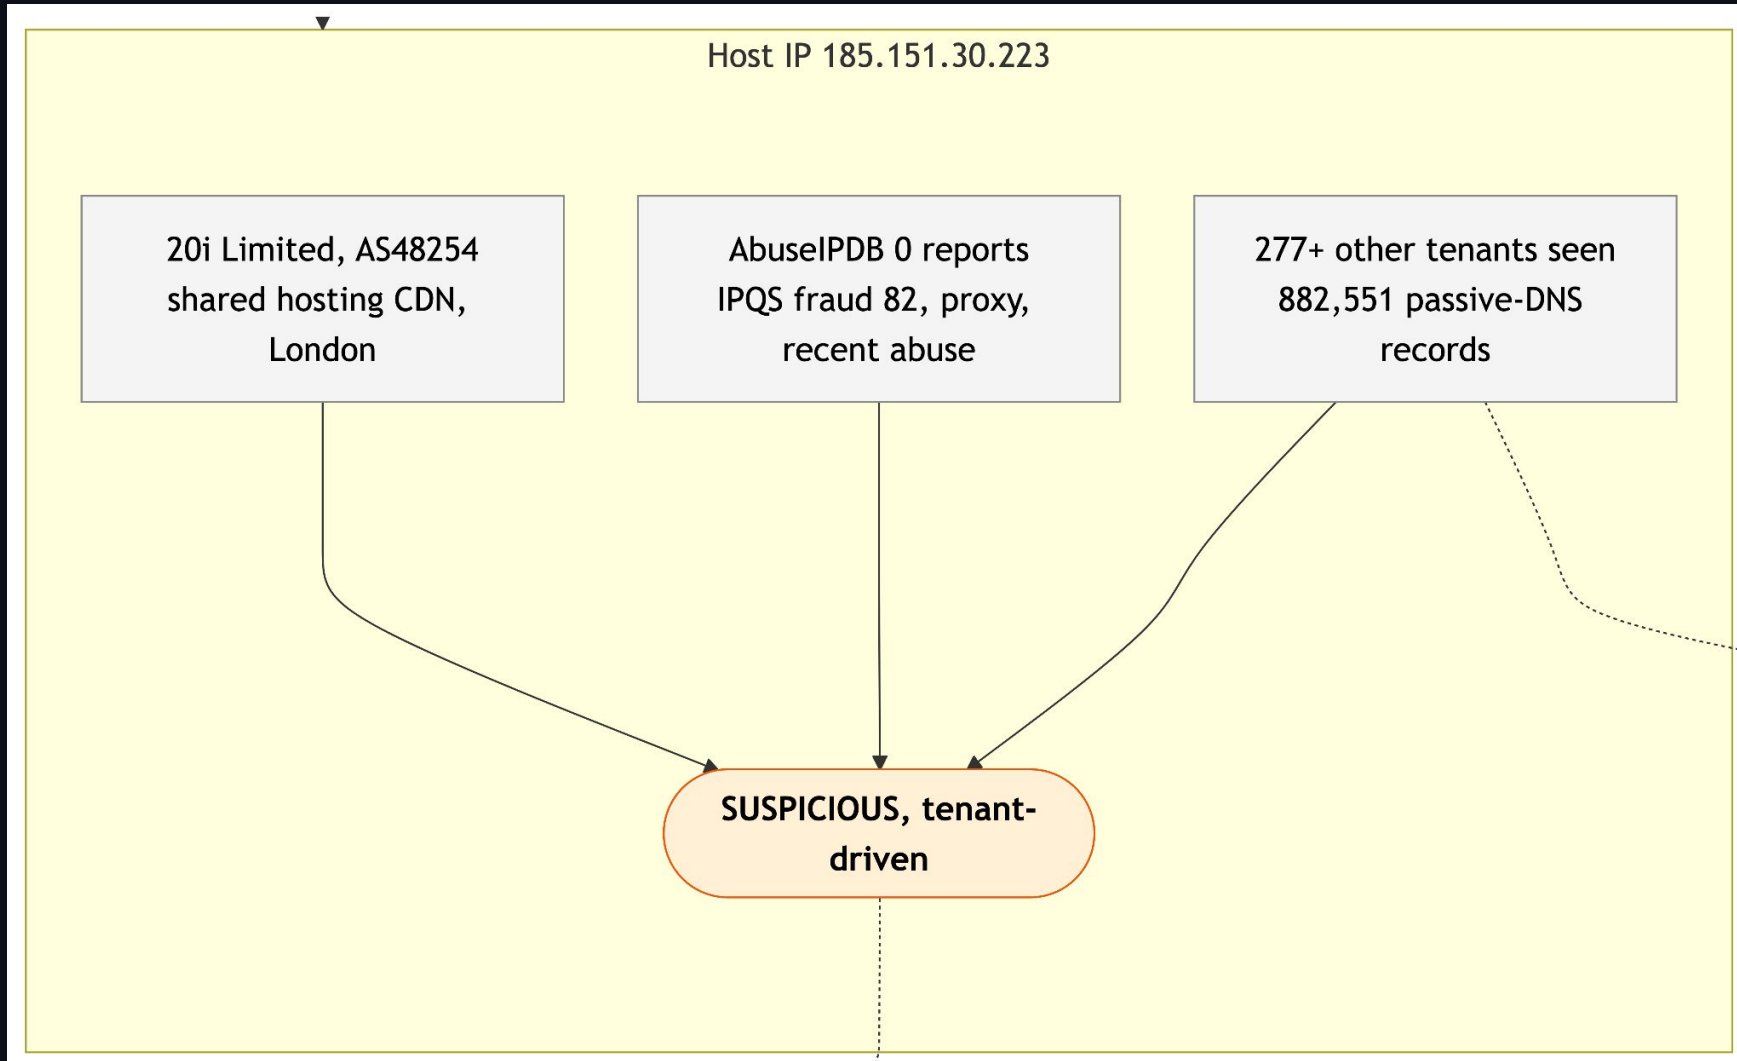

Host IP 185.151.30.223

20i Limited, AS48254
shared hosting CDN,
London

AbuseIPDB 0 reports
IPQS fraud 82, proxy,
recent abuse

277+ other tenants seen
882,551 passive-DNS
records

**SUSPICIOUS, tenant-
driven**

Pivot candidates (other tenants)

coinbasepaymenyexpert.com
Coinbase typosquat

cnigov.com
government lookalike

venixoptspac.com,
waveofnation.com
VT 10 positives each

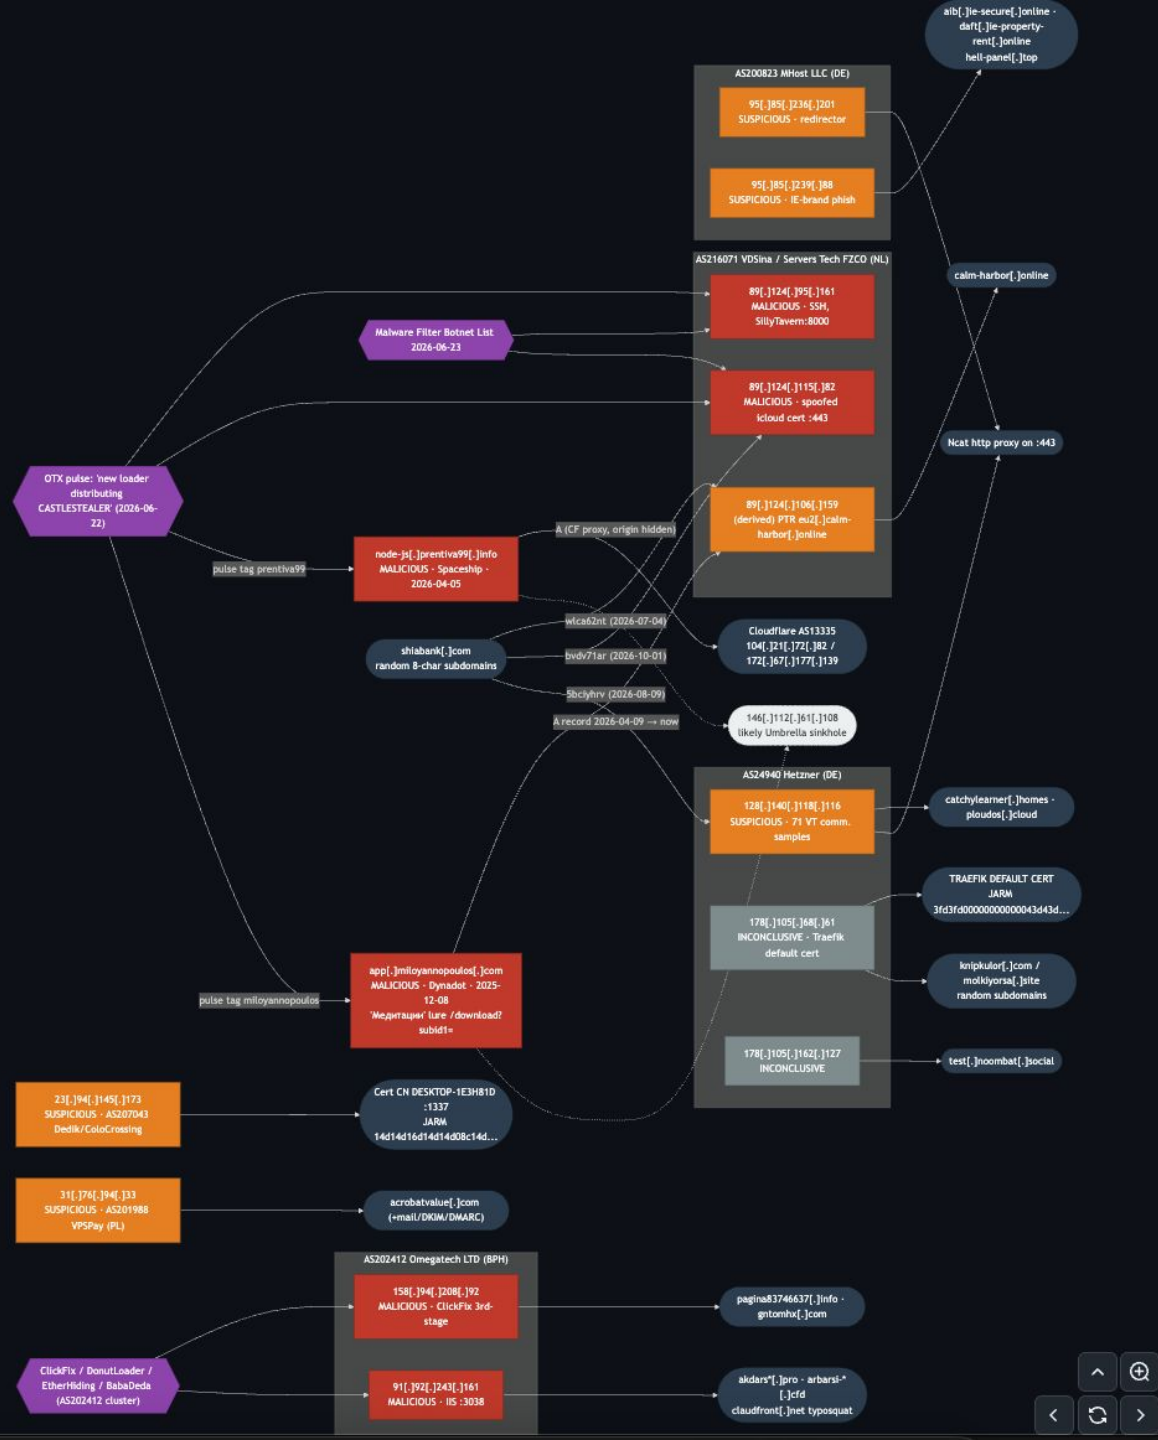

Single shot enrichment

THE PROMPT

`/c3-enrich tag=CastleStealer "" (11 IPs + 2 domains, defanged)`
 "" — defang and enrich, then build a mermaid graph of relationships

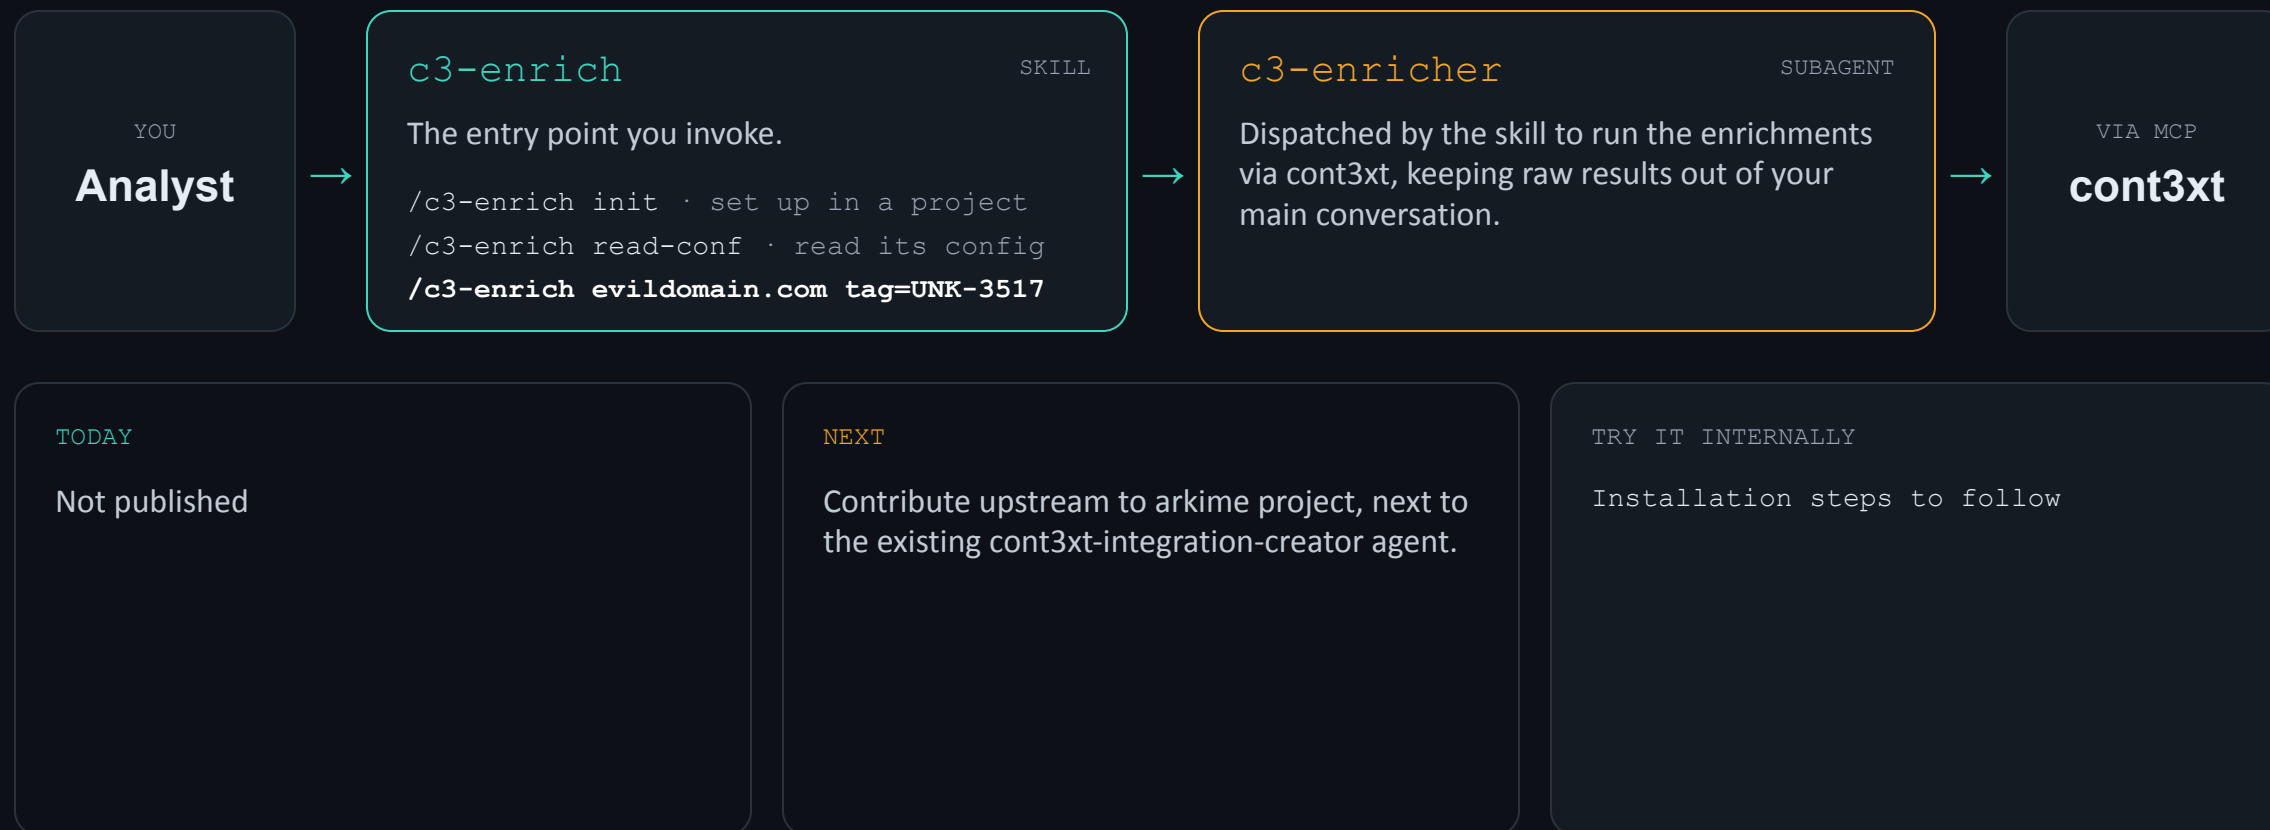

Claude's summarized response/output

Refanged and de-duplicated 13 indicators, then ran three c3-enricher subagents in parallel: 5 IPs, 6 IPs, and 2 domains. No project config existed, so all three used the default integrations. Raw and summary JSON was written to `./c3-enrich/{ip,domain}/`. Results: 5 malicious, 6 suspicious, 2 inconclusive. The core cluster is two VDSina (AS216071) IPs named in an OTX CASTLESTEALER pulse whose tags reference both seed domains, plus a shiabank[.]com random-subdomain link to a Hetzner IP. A separate ClickFix/DonutLoader cluster sits on AS202412 Omegatech. Wrote a defanged mermaid relationship graph to `CastleStealer_graph.md`. Neither domain resolved to any of the 11 listed IPs.

c3-enrich: the workflow, packaged

A Claude Code skill paired with a subagent, so the triage steps in this deck become one command.

TRY IT: CONT3XT SETUP & STARTER PROMPTS

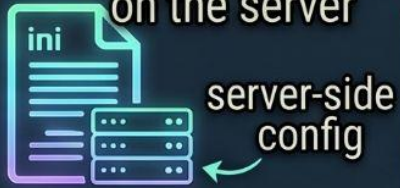

? STARTER QUESTIONS ?

Reputation Check?
Domain History?
Hash Malicious?
Email Legitimacy?

1. CONFIGURATION

Configure 'cont3xt.ini'
on the server

2. INSTALL MCP TOOL

Add via Claude interface

**Claude
Code**

Add via Claude interface

```
>_ claude mcp add --transport  
<proto> --scope <scope>  
cont3xt <REST OF CONFIG>
```

STARTER PROMPTS

```
>_ /c3-enrich [hash]  
doIntegrations="VT Hash"  
tag=DEMO-HASH   
VT Hash "Enrich a file hash"
```

```
>_ /c3-enrich [domain]  
doIntegrations=crt.sh  
tag=DEMO-CERTS   
crt.sh Certs "ssl certificate lookup"
```

```
>_ /c3-enrich [IP]  
doIntegrations=GreyNoise  
tag=DEMO-NOISE   
GreyNoise Analysis "internet-wide scan check"
```

3. RUN INITIAL TEST

```
>_ /c3-enrich  
@./PATH/TO/IOCs   
Processes  
entire  
IOC list tag=TAG
```

via MCP

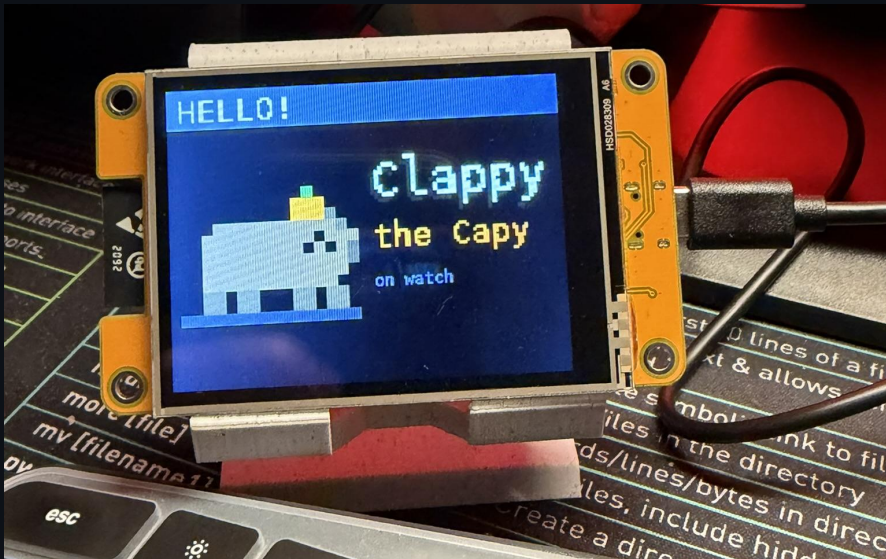

YOU: THE ANALYST

Invokes the automated workflow

cont3xt > more coverage, more context.

Last bit of fun, a current side project of mine

I am t3h done. Questions? Ask Andy ;)

My name is Inigo Montoya... You killed my father. Prepare to die. –The Princess Bride

I mean Liam Salusky
